

BTR reinforced police panel • M9z panel

Made in France

« The reinforced M9 road sign, M9z range, is a complementary information sign. When paired with a triangular (A range), round (B range), or square (C range) sign, it provides additional information to road users regarding hazards, prohibitions, obligations, and indications.

It includes all the features of a certified road sign, with its slim thickness of 50 mm, a 3M Class 2 adhesive film, and an aluminum composition with dropped, framed edges, ensuring it integrates harmoniously into its environment. By default, it comes in RAL 9006 (Silver Gray).

Our state-of-the-art embedded technology uses sorted LEDs to achieve the best balance between light output and energy consumption. This ensures a readable message in all circumstances while minimizing energy usage. This balance also helps improve the lifespan of our products, allowing them to continue functioning even after 10 years of standard use. »
